Shao Yong I Ching diagram Leibniz.

From here on out the document is more focussed on computing and the document could be viewed as starting truly from here on out.

Gottfried Wilhelm Leibniz discovered that the Shao Yong I Ching operates on a binary system.

While he analysed it through a Hellenistic mathematical lens, he altered the sequence to make it fit

his model. In this study, I will also approach the system from a Hellenistic perspective, but I will strictly adhere to tradition by following the original Fu Xi sequence.

So, let's have a look at this and look at tradition. Normally we have 5 elements, earth, water, fire, air and aether. (Terra, Aqua, Ignis, Caelum and Aetheris.) the last one is counted as the element that is not present on earth. For this reason, the seasons are also noted on the earth elements thus excluding the aether. Looking at the Shao Yong I Ching diagram we see that the lesser and greater yin and yang's coincide with this.

We can see a clear break with western tradition where the months are divided with a 12, we see here a total absence of the aether points resulting in 8. The elements in aether are; ♌ Leo, ♑ Capricorn and ♒ Aquarius. In western tradition Leo is the way to heaven at his location

directly below Aquarius, Capricorn and Aquarius together is often seen as the garden of Eden. At a first glance it seems these topics are unrelated, but when you look at the numbers and value's you can see logical overlapping and deliberate decisions.

If you look at Chinese mythology the meaning is completely logical.

They are two sides of the same coin, where the one describes the form, the other describes the function. This also explains why the row above the greater and lesser Yin and Yang's are divided in two equal divisions. Metal is like the aether not found on earth in a symbolical and descriptive way.

Mostly the west looks at eastern tradition literally. Instead of taking them as equal I have divided them as earlier said form and function.

Hellenic	Wu Xing
Earth	Water
Water	Earth
Fire	Wood
Air	Fire
Aether	Metal

Earth is literally stable and grounded but in Wu Xing water is the basis for life.

Water is literally fluid and changing but in Wu Xing the earth is always moving.

Fire is literally the expanding warmth but in Wu Xing wood grows to the heavens.

Air is literally untouchable creativity but in Wu Xing it's fire that inspires and makes one look up to the skies.

Aether is the realm of the gods and the combination of all elements while in Wu Xing metal is made from all the others and only humans can make metal. The connection to the importance of metal is found in multiple cultures all across the world, but if one is looking at only the words and not their meaning, then that makes it near impossible to see the correlations.

In online communities and over the years people have tried to make the connection between east and west but it never seems to work. This is simply because people try to literally overlap these symbols. There are so many people who tried and believed their own faults to a degree that the original meaning is near lost. This small part is partly serving as criticism to the spiritualist's community. Fire is not fire.

Taking a literal interpretation of the two systems, which is quite ironic seeing how spiritualists do the exact thing they blame academia of doing. But credits given where credits are due, at least the position of metal and the aether is almost always correct. It seems that by instinct we know the outlier by default even though the combination or insight is missing.

Wu Xing Ying and Yang.

The sequence is according to the seasons. Beginning in), **Lesser Yang** (Shao Yang) spring, wood. **Greater Yang** (Lao Yang) summer, fire. **Lesser Yin** (Shao Yin) autumn, metal.
Greater Yin (Lao Yin) Winter, water .

This seemed for me like A1,B2,A2,B1.
This means that there is a subdivision of **A** and **B** where A = A1 + B2 and B = B1 + A2.

Wu Zheng Se.

In the upcoming chapters the elements are noted with the names. Let's zoom in at the elements according to Chinese tradition. To the right I have coloured in elements according to the original Wu Xing coding and according to western tradition.

Hellenic	Wu Xing
Fire	Wood
Air	Fire
Water	Earth
Aether	Metal
Earth	Water

It should be noted that the west is quite loose with its colour coding while Wu Xing is verry strict about it. For simplicity's sake I name it Hellenic since that is the core origin instead of hermetic or astrological since those are separate branches with different colour coding's.

The colour coding of Wu Xing is called Wu Zheng Se (the 5 primary colours) as is this chapter's name.

- Wood: Green/Cyan. Spring, growth, vitality. The East.
- Fire: Red Summer, passion, transformation. The South.
- Earth: Yellow/Brown After summer, stability. The Centre.
- Metal: White/Grey Autumn, structure, purity. The West.
- Water: Black/Dark blue Winter, depth, wisdom. The North.

Wu Xing Trigram's

The names and their meanings.

- **QIAN** (乾) – The Sky / Heaven (☰): This is the ultimate Yang Metal. It represents pure creative power, leadership, focus, authority, and the laws of the universe.
- **DUI** (兌) – The Lake / Marsh (☱): This is Yin Metal. It symbolizes joy, communication, openness, and the autumn harvest. While Qian is hard like a sword, Dui is fluid like a shimmering surface of water.
- **KUN** (坤) – The Earth (☷): This is the ultimate Yin Earth. It represents total surrender, receptivity, nurturing, and the primordial mother. It is the soil that carries and feeds all life.
- **GEN** (艮) – The Mountain (☶): This is Yang Earth. It stands for stillness, meditation, boundaries, and immovable inner strength. While Kun is the soft agricultural soil, Gen is the solid rock.
- **ZHEN** (震) – The Thunder (☳): This is Yang Wood. It represents sudden action, movement, spring energy, and young green sprouts bursting through the earth with sheer force.
- **XUN** (巽) – The Wind / Wood (☴): This is Yin Wood. It symbolizes flexibility, gentleness, adaptability, and tree roots that slowly but surely carve their way through rock. Element: Water (Wisdom & Flow)
- **KAN** (坎) – The Water / The Chasm (☵): This trigram is unique because it directly shares its name with the element of Water. It represents depth, the unknown, intuition, danger, and the absolute drive to survive by flowing around any obstacle.
- **LI** (離) – The Fire / The Radiance (☲): Just like Kan, Li stands on its own and claims the element of Fire. It represents passion, illumination, intellect, vision, and transformation. It provides light but requires fuel (Water) to balance itself. so, we see fire and water only one time and all of the others 2 times. (sidenote) KAN (坎) and **LI** (離) (water and fire) are polar opposites of each other, this works asymmetrical in itself but with connection to the rest they work asymmetrical. It is a specific sequence in the form of 3 times 2 and 2 times one. Like a machine and nature in itself there would be no movement if it was balanced, there should always be chaos in order like the Taoists dictate. (Thermodynamic balance.)

Wu Xing Yin-Yang and Tetragram's.

Yang Masculine + energy		**Yin Feminine - energy**	
Greater Yang (Lao Yang) ⚌		**Greater Yin (Lao Yin) ⚏**	
QIAN (乾) – The Sky / Heaven ☰	Metal 金	**KUN** (坤) – The Earth ☷	Earth 土
DUI (兌) – The Lake / Marsh ☱	Metal 金	**GEN** (艮) – The Mountain ☶	Earth 土
Lesser Yin (Shao Yin) ⚎		**Lesser Yang (Shao Yang) ⚍**	
ZHEN (震) – The Thunder ☳	Wood 木	**KAN** (坎) – The Water / The Chasm ☵	Water 水
XUN (巽) – The Wind / Wood ☴	Wood 木	**LI** (離) – The Fire / The Radiance ☲	Fire 火
The 8 Heavenly Tetragrams (Cosmic Forces) These describe the dynamics of light, stars, heat, and cold (governed by Tai Yang and Shao Yin)		The 8 Earthly Tetragrams (Physical Manifestations) These describe the physical forms and currents manifested on Earth (governed by Shao Yang and Tai Yin)	
Great Heat (Pure Yang)	Fire 火	Great Force of Wind	Wood 木
Lesser Heat	Fire 火	Lesser Force of Wind	Wood 木
Light of the Stars	Fire 火	Flowing River Water	Wood 木
Sunlight	Fire 火	Rainwater	Wood 木
Moonlight	Water 水	Dew water	Metal 金
Light of the Planets	Water 水	Groundwater	Metal 金
Lesser Cold	Water 水	Lesser Immovability of the Mountain	Earth 土
Great Cold (Pure Yin)	Water 水	Great Immovability of the Mountain	Earth 土

This does differ greatly with tradition though, I will explain the reasoning behind this.

Yin and Yang is feminine and masculine energy, these themselves contain them both. Masculine energy is a combination of the greater masculine and the lesser feminine. Feminine energy is a combination of the greater feminine and the lesser masculine.

Yang. Masculine energy in **fire.**

Lao Yang is the dominating masculine power in Yang, It is the pure essence of Yang and thus in fire. it is contrived of the Qian and Dui. Qian the sky is the realm of the gods and metal is the element of the divine so sky is in metal. Dui the lake is the combination between water and earth and it reflects the moonlight like a shimmer of metal.

Shao Yin is the submissive feminine power in Yang, In the shadow of pure essence here the normally watery yin energy is fluid metal, In the fiery forge metal is moulded into a shape where it hardens out. Zhen the thunder and Xun the wind are both in wood. The thunder here is also a sharp contrast to what happens if the sky is warm and the clouds are full of water. Xun the wind is heavenly water since it is fluid and untouchable, it can be warm or cold and serves as the bridge between heaven and earth, Aswell as the thunder btw although the one is the soft form and the other the harsh form.

Yin. Feminine energy in **water.**

Lao Yin is the dominating feminine power in Yin, It is the pure essence of Yin and thus in water. It is contriver of the Kun and Gen. Kun The earth is the field below heaven and it's element is earth, it is the physical plane and the microcosm of the gods and so in the lowest and most stable element of water. Gen the mountains, where Kun is macrocosm here Gen is microcosm, The earth is contrived of the mountains. Here both elements are present in Lao yin since stability in both the divine as the mundane is the highest feminine form of power as it represents domination and rule.

Shao Yang is the submissive masculine power in Yin, in the stable high essence of feminine power the lower part is allowed to grow and be nurtured therefore it is in wood. We see here also the macrocosm of masculine power in raw emotions (Kan and Li). In the cradle of life fire and water breath in and out to expand. This is the spark of creativity and growth.

So where and why does this differ from tradition?

Traditionally people map it out in 5 divisions of winds because there are 5 elements. But the 5th is earth. The diagram itself is the 5th direction so I felt no need to brute force it in the Shao Yong I Ching while looking at the Wu Xing. This results in different mapping alone but also later on in different subdivisions. Especially the combination of Kan and Li is different, normally these two are miles apart while I put them together in Shao Yang. The notion of raw power in the fiery forge and the cradle of life is not present in tradition in this form.

The 8 Cosmic Forces (yang) is in metal since metal is the domain of the gods. It is not surprising then noting the first 4 as fire and the other 4 as water. This row is simply the combination of fire and water. Noting also that this is the lower form of Yang and thus metal.

The 8 Physical Manifestations (Yin) differ on the other hand. One would expect it to be in wood as the element as the lesser form of Yin but that is not the case, wood is what is possible on earth and as the counter form of metal it represents earth. We already see it in the first row being all wood and thus dominating this domain in that element. The rest is a division between metal and earth. Here we also see the second big asymmetry and how 5 does fit in 2.

Wu Xing Octet's.

Octet 1: The 8 Heavenly Bodies (Derived from Fire: Energy) These represent the macro-structures of the physical universe that hold light and celestial matter.		Octet 3: The 8 Earthly Structures (Derived from Wood: Motion) These represent the dynamic geological features and flowing resources on the Earth's surface.	
The Sun (日) — Absolute central Yang energy.	Fire 火	The Great Rivers (水) — Continuous liquid currents.	Water 水
The Moon (月) — Central reflective Yin mass.	Fire 火	The Fire/Lava (火) — Terrestrial heat and transformation.	Fire 火
The Stars (星) — Points of fixed cosmic light.	Water 水	The Soil/Plains (土) — Receptive land capable of growth.	Earth 土
The Planets/Zodiac (辰) — The structural pathways of time.	Water 水	The Rocky Mass (石) — Hard, unyielding structural matter.	Earth 土
The Celestial Heat (暑) — Radiant active temperature.	Wood 木	The Great Oceans (海) — The vast reservoir of water.	Water 水
The Cosmic Cold (寒) — Absorbent passive vacuum.	Wood 木	The Active Volcanoes (火山) — Piercing earth-bound heat.	Fire 火
The Daylight (晝) — The manifest cycle of illumination.	Earth 土	The Deep Canyons (谷) — Low, hollow voids in the landscape.	Wood 木
The Night (夜) — The hidden cycle of darkness.	Earth 土	The High Plateaus (原) — Elevated, flat land masses.	Wood 木
Octet 2: The 8 Atmospheric Forces (Derived from Water: flow and movement.) These describe how cosmic energy moves through the sky and creates weather dynamics.		Octet 4: The 4 Material Forms (Derived from Earth: Physical Matter/pure form) These describe the non-sentient, physical foundation of the planet. They are completely bound to the soil, anchoring the material world.	
The Great Wind (風) — Sweeping atmospheric motion.	Wood 木	The Flora/Plants (草) — Soft, adaptive organic growth.	Wood 木
The Thunder (雷) — Sudden electrical release.	Wood 木	The Trees/Forests (木) — Rigid, vertical organic structure.	Wood 木
The Rain (雨) — The descent of moisture.	Water 水	The Minerals/Ores (金) — Crystallized subterranean elements.	Earth 土
The Dew (露) — The quiet condensation of air.	Water 水	The Heavy Stones (石塊) — Dislodged geological mass.	Earth 土
The Frost (霜) — The freezing contraction of vapor.	Earth 土	Octet 5: The 4 Material Forms (Derived from Metal: Application of Order / Cosmic Blueprint) These describe the transition into conscious, mobile, and complex life. They possess internal nervous systems, structural frameworks, and the capacity to breathe and process the atmosphere (Qi).	
The Snow (雪) — The crystallization of water.	Earth 土		
The Fog/Mist (霧) — The blurring boundary of air and water.	Fire 火	The Animals (獸) — Mobile, active physical life.	Water 水
The Clear Sky (晴) — The calm, unhindered atmosphere.	Fire 火	The Birds/Fowl (禽) — Atmospheric, light physical life.	Water 水
		The Invertebrates (蟲) — Ground-bound, primitive life.	Fire 火
		The Human Form (人) — The final synthesis of Form and Function.	Fire 火

Octet 1: in here I have the sun and the moon in fire, this because they represent the spark of creation, the sun as Yang and the moon as Yin, normally people put the moon under water but since it reflects the sun as its counter half they occupy the same element, The stars and the planets drift in the sky and are only seen at night, thus they represent water. The celestial heat and cosmic cold are expansion and contraction and thus in the element of wood. The daylight and the night is the lower plain of the celestial heat and the cosmic cold. As their lower forms they are in the element of earth.

These domains fall all in the element fire as it all represents the spark in some way.

Octet 2: the great wind and thunder just like Zhen and Xun are in the element of wood. The rain and the dew both fall into the element of water as one is falling from the heavens and the other one is rising from the ground. The frost and snow is the cold and stable for of rainwater and dew and thus in element earth. The fog/mist and clear sky represents water either at it max volume of evaporated.

These domains fall all in the element of water since they are all water in different forms.

Octet 3: The great rivers and the great oceans, both in element water as one is microscopic and the other macroscopic. The fiery lava and the active volcanoes are both in fire as also one microscopic and the other macroscopic. The soil/planes and rocky mass are both stable forces, where the river or lava flows on the soil and planes the rocky mass is where the volcanoes are or if low enough where the ocean is. The deep canyons and high plateaus are moving earth either horizontal or vertical. It is moving earth.

These domains fall all in the element of wood since their ultimate changing (or unchanging) nature.

Octet 4: the plants and the trees are nature moving either horizontal or vertical, they are in wood since they represent growth. The minerals/ores and heavy stones are in the element of earth.

These domains fall all in the element of earth since they are things found on earth.

Octet 5: the animals and the birds, evermoving and ever unchanging. They are water in life and thus represent water. The Invertebrates and the human form is in the element of fire. seen together they represent the macrocosm and microcosm of the spark of creation.

These domains fall under the element of metal since they represent complex life.

Octet 1 and 2 are in Yang energy while Octet 3 to 5 are in Yin energy Ashwell as the 8 Cosmic Forces are in Yang and the 8 Physical Manifestations in Yin.

Wu Xing final layer.

1. Li Row of Fire 火		3. Qian Row of Metal 金	
Fu (復) – Return / The Turning Point	Wood 木	Sheng (升) — Pushing Upward	Wood 木
Yi (頤) – Providing Nourishment / Jaws	Wood 木	Da Xu (大畜) – The Great Taming Power	Earth 土
Tun (屯) – Difficulty at the Beginning	Water 水	Xu (需) – Waiting / Nourishment	Water 水
Yi (益) – Increase	Wood 木	Da You (大有) – Possession in Great Measure	Fire 火
Zhen (震) – The Arousing / Thunder	Wood 木	Da Guo (大過) – Preponderance of the Great	Wood 木
Shi He (噬嗑) – Biting Through	Fire 火	Ding (鼎) – The Caldron	Fire 火
Sui (隨) – Following	Metal 金	Gou (姤) – Coming to Meet	Metal 金
Wu Wang (無妄) – Innocence / The Unexpected	Metal 金	Da Zhuang (大壯) – Power of the Great	Metal 金
Ming Yi (明夷) – Darkening of the Light	Fire 火	Tai (泰) — Peace	Earth 土
Bi (賁) – Grace / Adornment	Fire 火	Gu (蠱) – Work on what has been Spoiled	Wood 木
Ji Ji (既濟) – After Completion	Water 水	Jing (井) – The Well	Wood 木
Jia Ren (家人) – The Family / The Clan	Wood 木	Xun (巽) – The Gentle / Wind	Wood 木
Feng (豐) – Abundance / Fullness	Fire 火	Xiao Chu (小畜) – The Taming Power of the Small	Wood 木
Li (離) – The Clinging / Fire	Fire 火	Lu (履) – Treading / Conduct	Metal 金
Ge (革) – Revolution / Molting	Metal 金	Guai (夬) — Break-through / Resoluteness	Metal 金
Tong Ren (同人) – Fellowship with Men	Metal 金	Qian (乾) – The Creative / Heaven	Metal 金
2. Kun Row of Wood 木		**4. Kan Row of Water 水**	
Kun (坤) – The Receptive / Earth	Earth 土	Shi (師) – The Army / The Multitude	Water 水
Bo (剝) – Splitting Apart / Peeling Off	Earth 土	Meng (蒙) – Youthful Folly / Inexperience	Water 水
Bi (比) – Holding Together / Union	Water 水	Kan (坎) – The Abysmal / Water	Water 水
Guan (觀) – Contemplation / View	Wood 木	Huan (渙) – Dispersion / Dissolution	Wood 木
Yu (豫) – Enthusiasm / Readiness	Wood 木	Jie (解) – Deliverance / Liberation	Wood 木
Jin (晉) – Progress / Advancing	Fire 火	Wei Ji (未濟) – Before Completion	Fire 火
Cui (萃) – Gathering Together / Massing	Metal 金	Kun (困) – Oppression / Exhaustion	Metal 金
Pi (否) – Standstill / Stagnation	Metal 金	Song (訟) – Conflict / Strife	Metal 金
Qian (謙) – Modesty / Humility	Earth 土	Lin (臨) – Approach	Earth 土
Gen (艮) – Keeping Still / Mountain	Earth 土	Sun (損) – Decrease / Diminishing	Earth 土
Jian (蹇) – Obstruction / Water on Mountain	Water 水	Jie (節) – Limitation / Restriction	Water 水
Jian (漸) – Development / Gradual Progress	Wood 木	Zhong Fu (中孚) – Inner Truth	Wood 木
Xiao Guo (小過) – Preponderance of the Small	Wood 木	Gui Mei (歸妹) – The Marrying Maiden	Wood 木
Lu (旅) – The Wanderer / Travel	Fire 火	Kui (睽) – Opposition / Estrangement	Fire 火
Xian (咸) – Influence / Wooing	Metal 金	Dui (兌) – The Joyous / Lake	Metal 金
Dun (遯) – Retreat	Metal 金	Lu (履) – Treading / Conduct	Metal 金

In here we see another subdivision by Li, Qian, Kun and Kan. These names are used before and that confused me but the most logical explanation for this I could find is that it is like a city and a province with the same name. so the recurring of the names is not a bug but rather a feature it seems. These names are divided into fire, metal, wood and water.

Kun is a great example of this, it appears 3 times and 2 times as earth and one time as wood. Why wood that one time here and not elsewhere? Kun means literally earth, but in broader concepts it could refer to mother nature or microcosm. Context makes it what it means and this is also why it is verry difficult decrypting such concepts.

Li and Kun are fire and wood in the context of the masculine energy. One is the higher mind of men, the drive to reach the heavens and build a better future. The lower mind is in expansion, growing and thriving. The Qian and Kan are in metal and water since the higher mind is stabile as metal and divine in nature while the lower mind is in emotions and the everchanging nature of this world.

Yang has its high form in the low and its low form in the high and Yin has its high form in high and low in low. So why does Qian stay the same and is Kun changing from element? Because firstly one word has more meanings than the other and one word can be interpreted other that other ones. In the context of the last row and the 4 directions earth is the map itself so while every other element stayed the same Kun falls in the element of wood. Etymological Kun means earth and is heavily linked to nature, the character of 坤 is split up between 土 (Tǔ) and 申 (Shēn). Tu means earth but Shen has also the meaning of lighting which is in wood.

So, what is now really the difference and how is this whole thing mapped?

Whell firstly according to form and function we map the elements as following.

- Fire; upwards energy, raw passion, transformation.
- Water; horizontal energy, raw emotion, depth, wisdom.
- Earth; solidity, stability.
- Wood; expansion, growth, vitality
- Metal; consolidation, structure, purity.

Looking at it from a psychological perspective we see the following. The lower mind of men is in raw emotion, the higher mind is in raw passion, the lower minds raw emotion is in expansion and the higher mind is the raw passion in consolidation.

The lower mind of females is in expansion ruled by a combination or raw passion and raw emotion. The higher mind is in consolidation of stability.

When the elements are in disbalance this can explain the toxicity both genders show as well as their ultimate potential. It shows us an explanation about the conquering nature of men and the emotional one of women. Every person is different in how much feminine and masculine energy someone has and so the behaviours can differ wildly and so this mapping is never a one to one on female and male. In short, this shows us the function and not the form.

Taking it literally would give mounting errors since it is clearly shown that female and male are present in both male and female. I could not be clear enough on this warning, because it could result in all men cheat and all women are nagging. That would be a gross oversimplification to the point of incorrectness as we see in nature already, not all men are as masculine as others and not all females are as feminine as others. That is the asymmetry in life and also why people are so different.

More about this subject I would refer to either Karl Gustaf Jung, of G.H. Mees specifically for the psychology of archetypes such as the Animus and the Anima.
